

BUSINESS ANALYSIS CERTIFICATION COURSE

Course Overview

Throughout this course, you'll explore the pivotal role and duties of the Business Analyst (BA) - acting as the vital communication bridge between various business sectors and a crucial contributor to project triumph. Gain insights into methods that ensure project success at every stage, starting from the identification and assessment of potential projects to ensuring that the final project deliverables align with the specified requirements. Engage in practical exercises that enable you to delineate the project's scope and proficiently employ requirement-gathering methods suitable for diverse projects and audiences. Address the distinctive requirements of clients, stakeholders, and the IT department while focusing on constructing, documenting, conveying, and overseeing requirements.
